

Introduction to Endodontics *(Root Canals)*

Dr. Anthony Caiafa

BVSc, BDSc, MANZCVS

Adjunct Associate Professor, School of Veterinary and Biomedical Sciences
James Cook University, Townsville,
Queensland, Australia 4811

Our introduction to endodontics workshop is designed for the experienced dental practitioner who is ready to be introduced to the skills of endodontics. This workshop will cover an in-depth review of pulpal disease pathogenesis, equipment use, techniques for mechanical filing of the canal(s), 3 dimensional obturation and sealing of the root canals and communication with clients.

With a strong focus on the practical, this hands on lab will have you practicing the finer skills of endodontics.

Key Learning Outcomes:

- Access to the root canal system
- Dental radiology and interpretation
- Mechanical instrumentation
- Use of chemical agents and obturation materials
- Final sealing of the tooth structures to prevent bacterial ingress
- Avoiding endodontic errors

Root canal therapy offers a good alternative to extraction especially for the "cornerstone" teeth such as the canine tooth and the carnassial tooth (maxillary 4th premolar and mandibular 1st molar).

Cost \$1200 inc GST | **PLACES STRICTLY LIMITED TO 12 Veterinarians**
